

## ASSIGNMENT #2

1. To do a research and compile a list of hazards (At least 5 per category) base on following categories:
  - Physical Hazard
  - Biological Hazard
  - Chemical Hazard
  - Ergonomic Hazard
  - Physiological Hazard
2. For each of the above hazard, give one example of specific consequences (injury, property damage, financial losses, etc.) resulted from such hazard **and** propose possible mitigation.

Note: AFAIK, there isn't a specific standard as to how a certain kind of hazard should be categorized under specific category stated above. The category however does help us to identify nature of hazard. Your assignment therefore should emphasize on nature of hazard & factors contributing towards it

3. To present your assignment (15 mins) by way of **teaching** the Safety Basic Class on the above subject. Your presentation must consist of: Title – Intro – Content - Closing

Objective: At the end of your presentation, Basic Safety Class will be more alert about various types of hazardous conditions which they may encounter day by day and are able to avoid possible injuries.

Group will be assessed based on:

- Content of presentation (40%)
- Proficiency of Presentation (35%)
- Group Effort Shown (25%)
